
He'll be a happier, more productive dog with **Kelvin – the Thermokennel**

Just like people, dogs can freeze to death or suffer from heat stroke. Uncomfortable temperatures can release stress hormones and seriously impact the wellbeing and performance of your dog.

Working dogs are a critical asset to sheep and beef farms. Housing temperatures can impact dog performance and ultimately their effectiveness on the farm.

KELVIN
THE THERMOKENNEL

Kelvin captures your dog's body heat to keep it warm through a cold winter's night.

High-end insulation

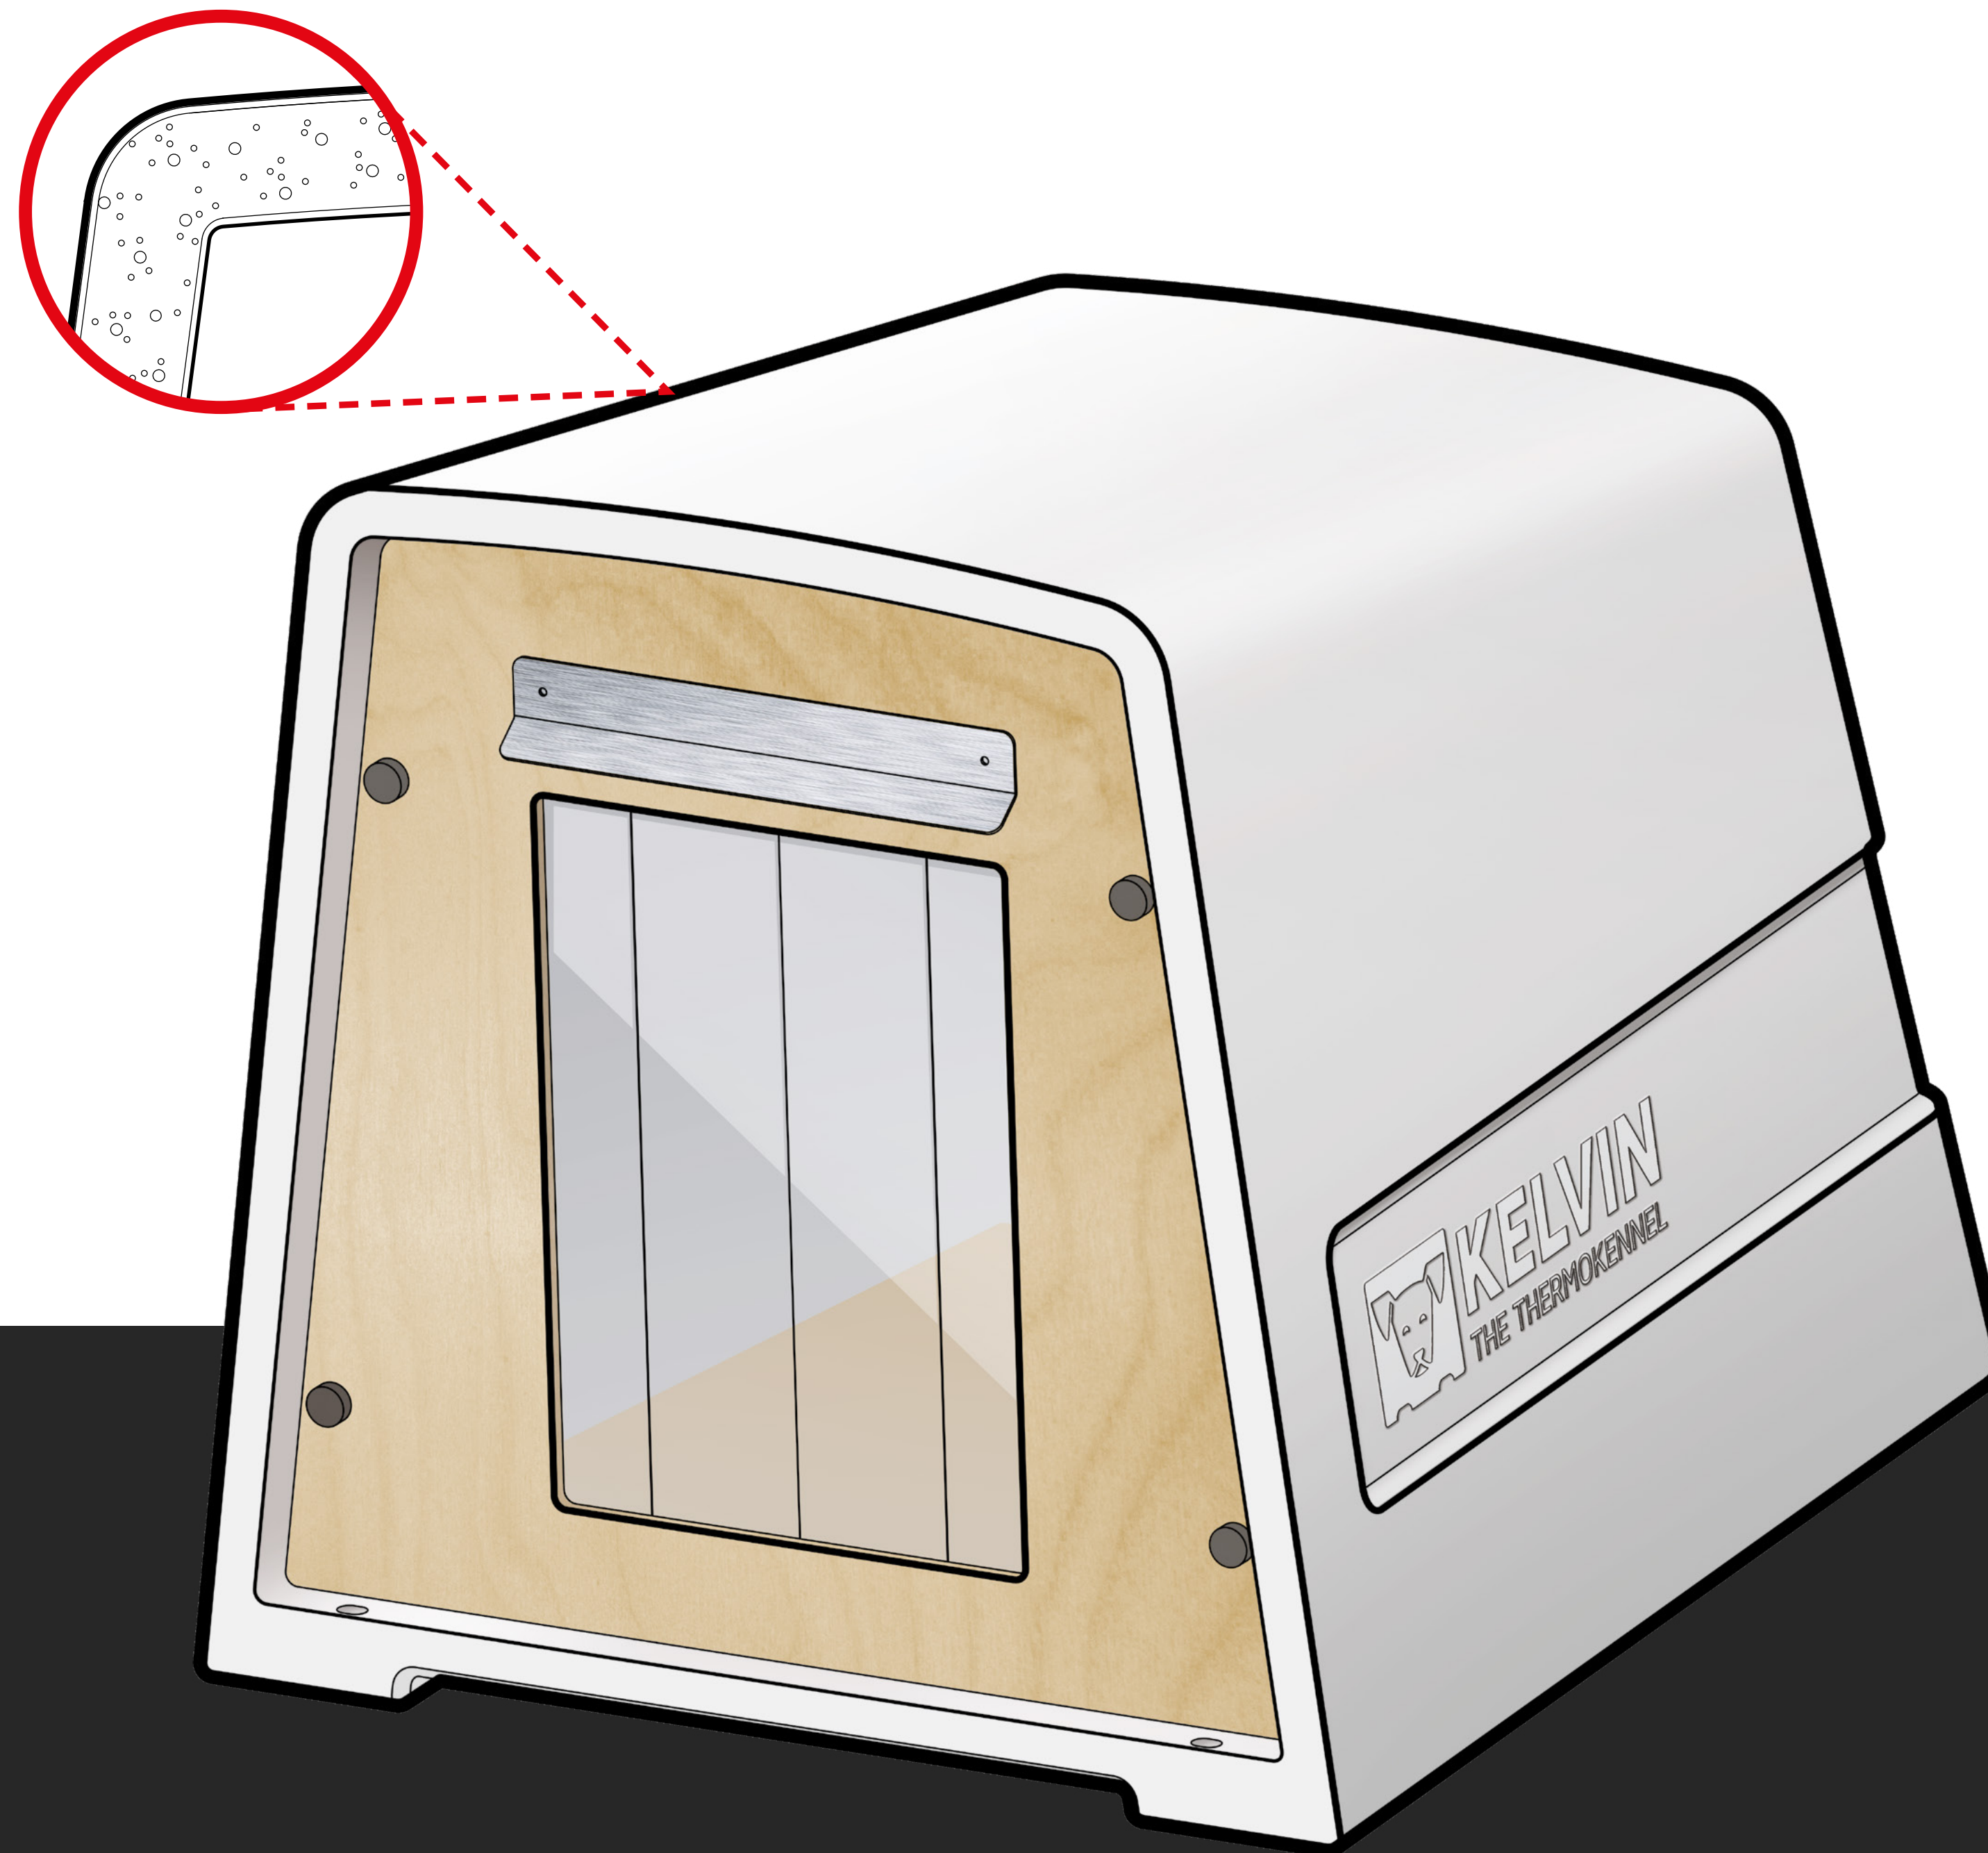

Kelvin meets the latest insulation standards for New Zealand homes, creating a warm & dry micro-climate for your dog.

Weather protected

The one-piece design prevents water ingress. Durable and UV resistant construction ensures it's waterproof, wind resistant, and weather tight.

Raised floor

A raised plywood floor means the wet, frost, and ground temperature won't disturb the interior climate.

Rugged construction

Durable and rigid, Kelvin is made with an environmentally stable and UV-resistant plastic that won't deteriorate or rot over time.

Easy to use

The Thermokennel has a removable front panel & floor for easy cleaning. The front can also be left off on hot summer days.

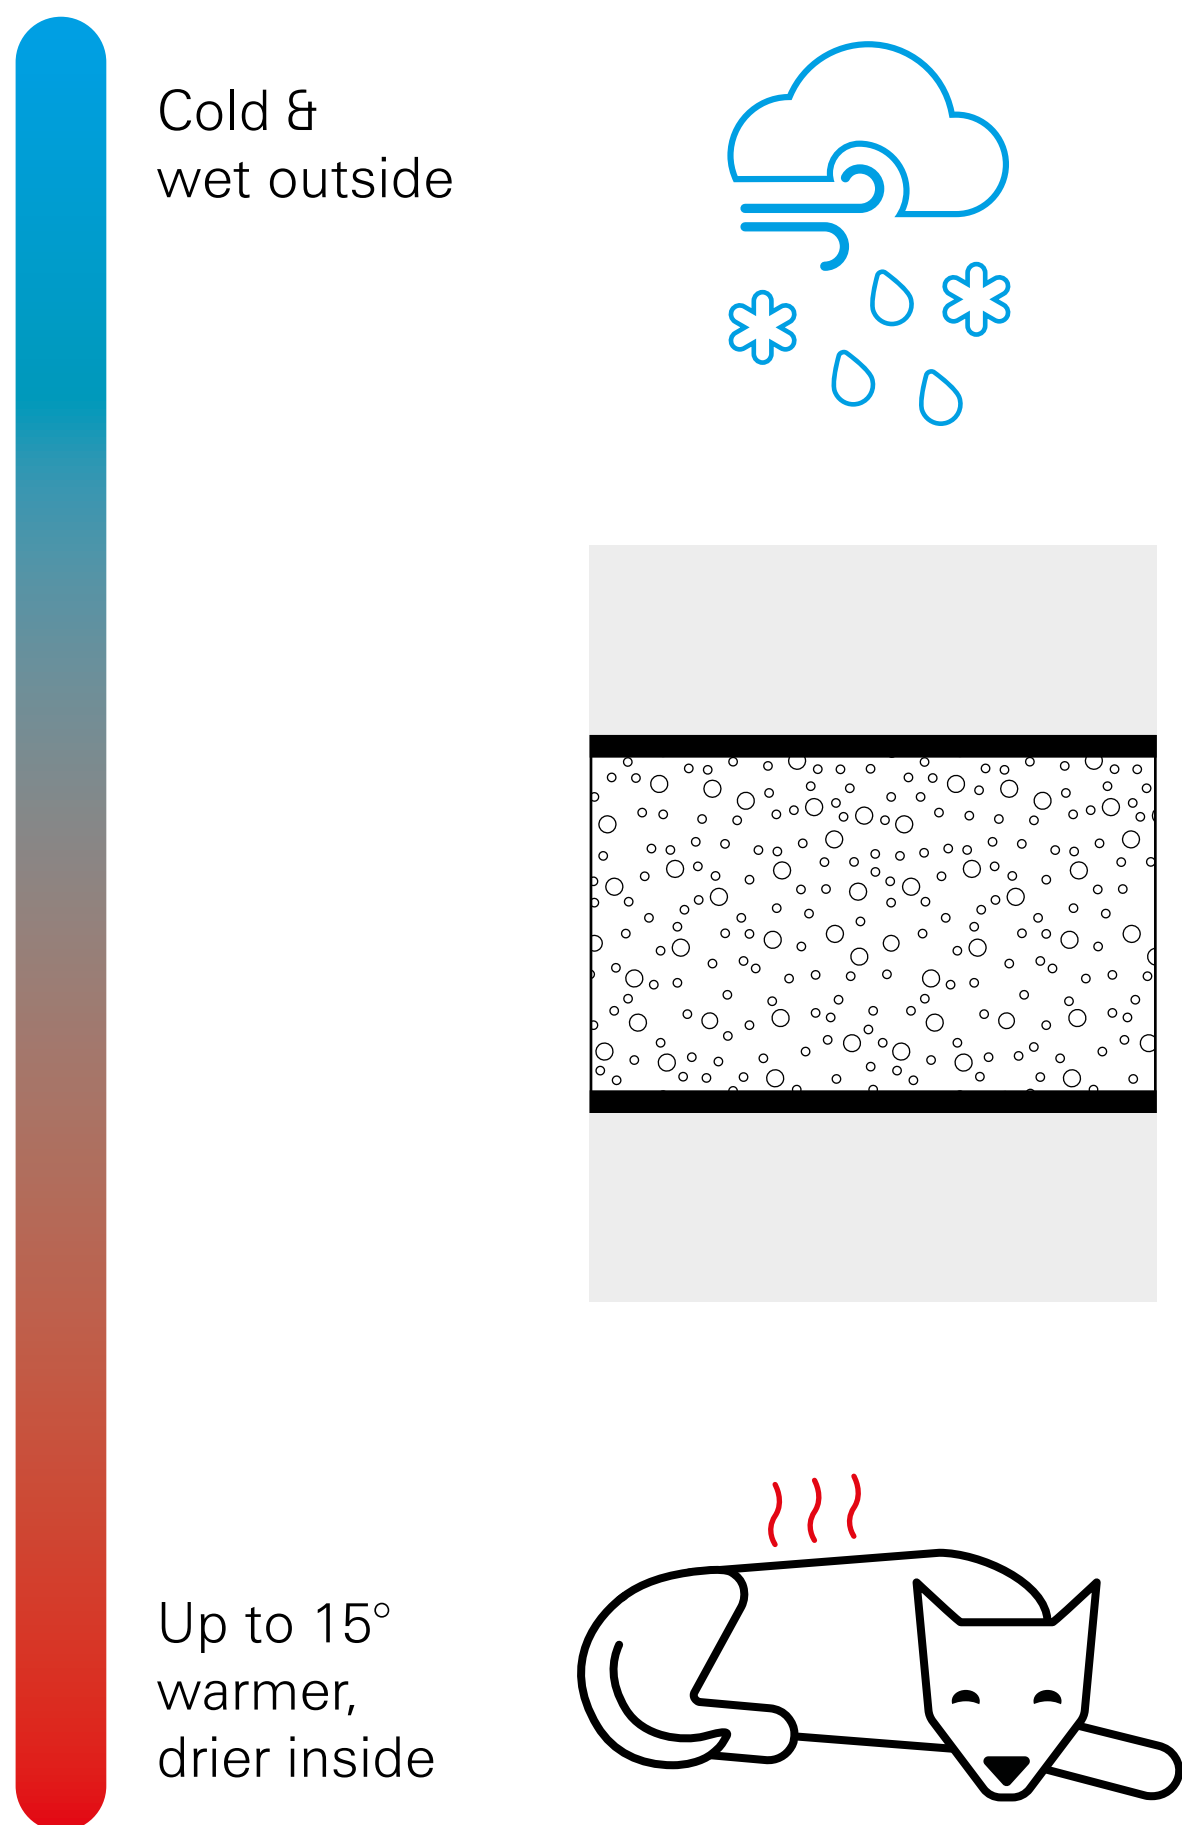

Secure in place

Through holes secure the kennel using hammered pegs or screwed fasteners.

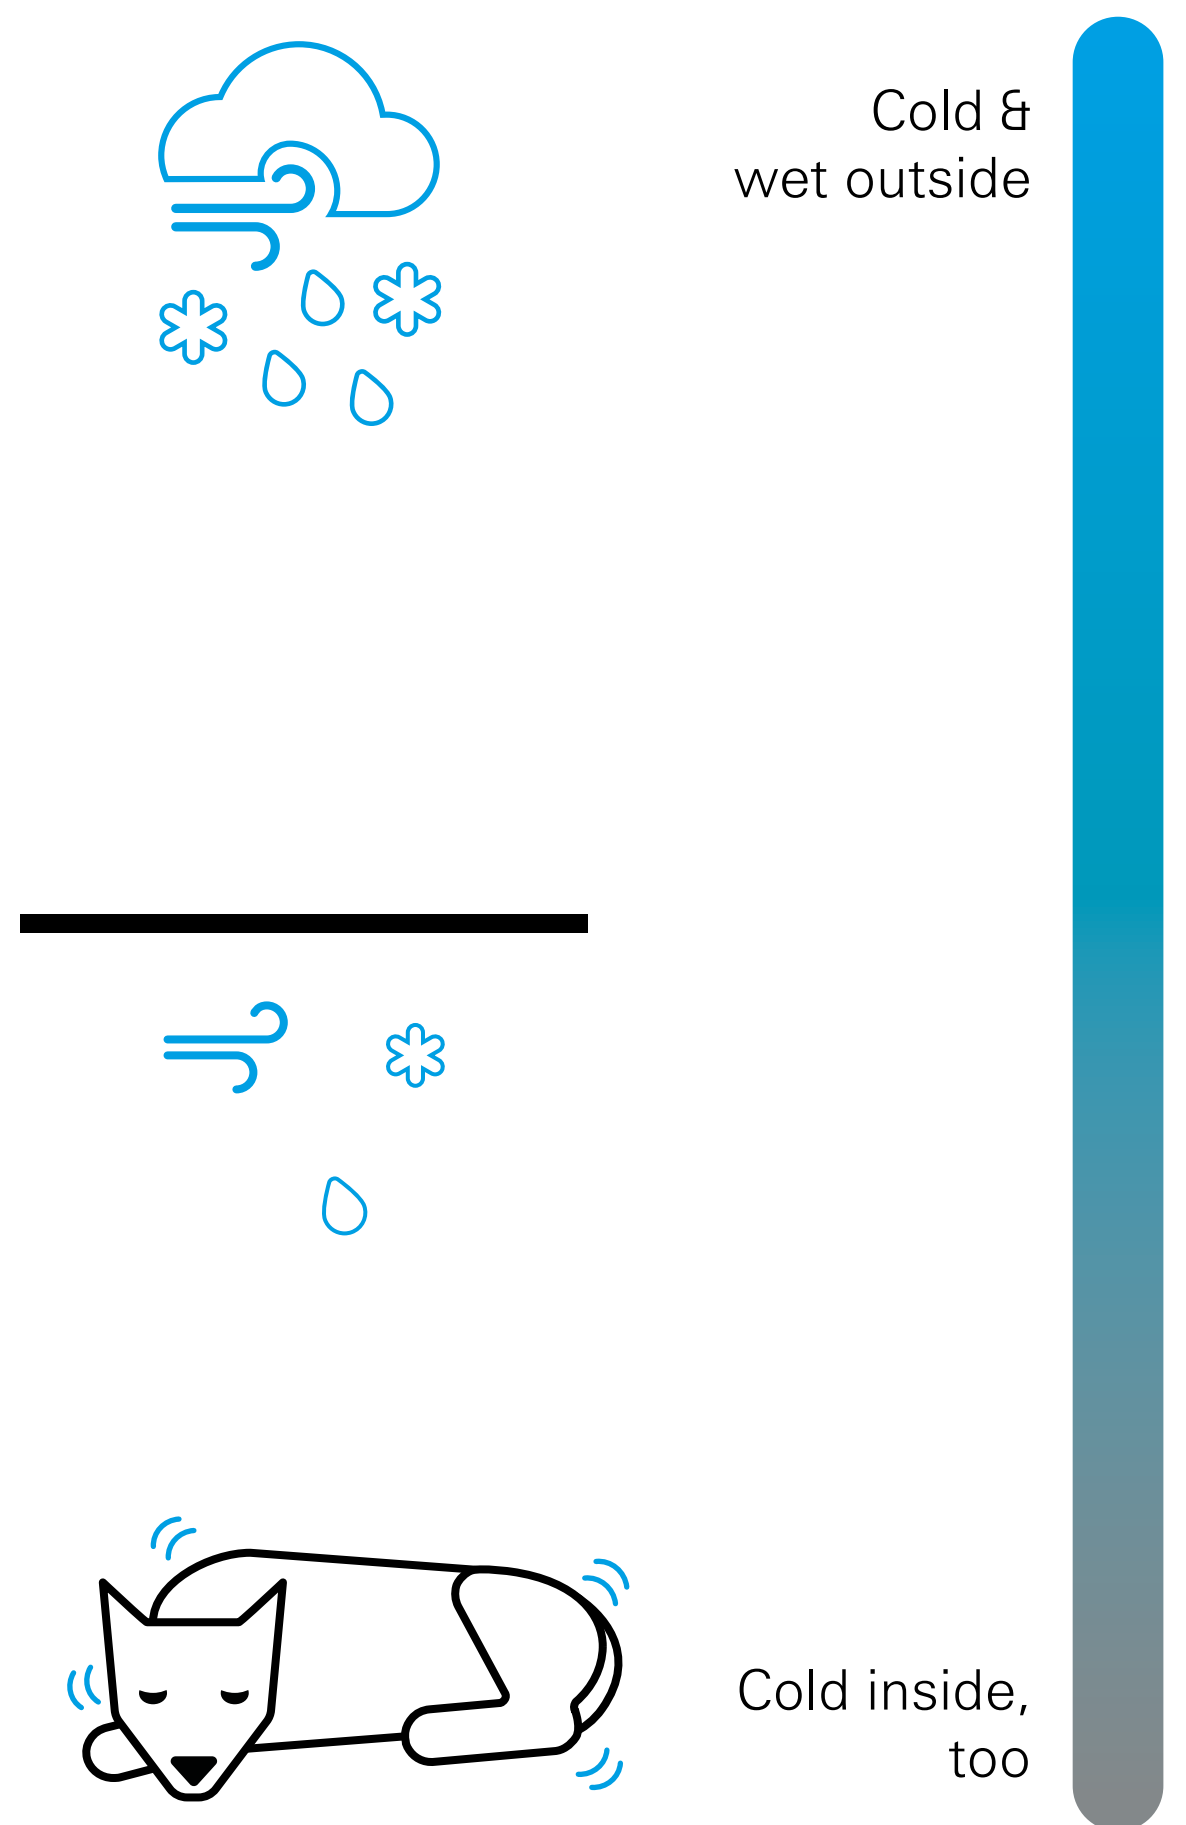

For the love of dogs.

Insulation at the core

Kelvin – the Thermokennel

Regular kennel – no insulation

Care for your dog

An uninsulated kennel is like an uninsulated house.ASUREQuality recommends a dog's environment is kept between 15-26°C. Kelvin achieves this by capturing and retaining a dog's body heat through quality insulated walls & floor.

Kelvin is:

- Waterproof
- Weather tight
- Wind resistant
- Off the ground
